

# PAPER FLOW

28-29-30 Septembre 2017  
5-6-7 Octobre 2017  
horaires 10:00-17:00

Brusaporto (Milan-Bergame - ITALY)

**Partenaires de SMG Systems :**

- Enregistrement gratuit sur le site SMG Systems  
( [www.smg-systems.fr](http://www.smg-systems.fr) )
- Réservation hôtels,
- Transferts aéroport Milan-Bergame

### **PERONI PEN LOOP**

*Machine permettant la pose d'élastique porte stylo sur livres ou agendas.*

*Fonctionnement à base de colle hot-melt  
Largeur des élastiques de 8 à 25mm  
Vitesse 700 cycles/heure max.*

### **PERONI AGD-EI**

*Machine semi-automatique permettant la pose de bande élastique pour la fermeture de livres ou agendas.*

*Fonctionnement à base de colle hot-melt  
Largeur des élastiques de 4 à 15mm.  
Vitesse 450 cycles/heure max.*

### **PERONI AGD-EI / Auto**

*Machine **automatique** permettant la pose de bande élastique pour la fermeture de livres ou agendas.*

*Fonctionnement à base de colle hot-melt  
Largeur des élastiques de 4 à 15mm.  
Vitesse 600 cycles/heure max.*

**Dispositif pick n' place en option**

### **SOLEMA FAST-BOOK**

*Margeur de blocs cousus ou corps d'ouvrages à emboîter pour toutes lignes de production.*

*Existe avec pré-alimentation automatique ou dépalettiseur full automatique.*

### **SOLEMA MINI-SOL**

*Cet empileur est l'un des plus compacts et des plus simples de la gamme, le MINI-SOL est adapté pour des brochures piquées ou reliées et permet de sortie à droite ou à gauche.*

### **SOLEMA SMART-BOX**

*L'encartonneuse SMART-BOX convient pour toutes les productions et permet la limitation d'emplois pénibles en sortie de chaînes de reliure ou de brochage.*

### **SOLEMA GANDRIA**

*Découpe parfaitement perpendiculaire de carton compact et de carton ondulé, la GANDRIA convient pour les relieurs comme pour l'industrie de l'emballage.*

### **SOLEMA ANDAX**

*La solution la plus simple et la plus efficace pour assembler des croisillons en carton ondulé.*

## Autres Exposants

---

### ***A synergy of strengths to give life to the projects you have in mind***

*Paper Flow is a tool to **accelerate** your new projects and a **meeting point** to build up effective collaboration in the field of packaging and book-binding. The companies promoting the event will bring their cutting-edge products and technology to show how paper can be turned into premium, complex and innovative products by **combining different manufacturing processes**.*

*Don't miss this opportunity to meet up with other companies, each having its own area of specialization in manufacturing. You'll discover the true strength in seeing that your idea can enter a flow of know-how which will make it possible and tangible. Take as much value as you can!*

#### **DCH200**

*Using tried and tested traditional dies, our DCH200 die cutter allows **drastic reductions in start up times** and work repetition, increasing the quality of the die cut product.*

*Our STEP&REPEAT system allows **reductions in the cost of die cutting**, helping start up and avoiding points of attachment on the finished product, delivering the product at the machine exit free of excess paper and ready to be packed without further steps.*

### 2HCR - 2HCC

The book production market is more often than ever demanding that value be added to products. Furthermore, the market is becoming ever more segmented, needing solutions for even **small and medium sized batches**. In the world of board books and hard cover products, the need for **ROUNDED CORNERS** on the book block and covers is becoming more and more common. This makes the finished product more elegant and attractive to the customer.

**Laminating machine** model **TECNOMAC EVOLUTION 3** is a professional fully automatic particularly suitable for medium and big volumes. It is expressly designed for graphic and packaging industries and laminating services. **TECNOMAC EVOLUTION** is one of the most installed models in Europe since it represents a good compromise between **high productivity** and **easiness of use**.

### TRIM&PERF

The constant request from clients for different product types to offer the market, without having to invest in different machines, lead to the creation of our **TRIM&PERF** project. Designed as a **multi function machine**, it **die-cuts, perforates trims and cuts** materials from plastic to cardboard, and can be used alone or in line with other machines.

### EASY FLY PRO

In the field of soft cover book production, **covers with flaps** are becoming ever more popular. This makes the book more prestigious and allows the publisher to use the inside flap for information about the author, bibliography, etc...

This need drove us to invest in research and development to find the best possible industrial solution, one which allows the user to create a product while reducing production costs drastically, while at the same time increasing the quality of the finished product.

### LAMISTEP

Evolution of **coating systems**, Tecnomac LAMISTEP is able to apply sleeeking foil on paper or cardboard. It is composed of automatic feeder, special heated chromed roll, rollers at feeder and at delivery, foil unwinder and rewinder, inclined table for sheet collection.

Through a touch screen control panel the operator can easily set all the functional parameters of the machine, such as sheet length and foil position on sheet, and verify constantly the right functioning of the machine.

### SPRINTER 3

TECNOMAC SPRINTER 3 model is particularly indicated to **small productions** and **fast work changes**. These laminating machines are suitable for the offset printers with integrated finishing department. Thanks to its compact structure this machine can be installed in few minutes.

The machine, fully automatic, is equipped of feeder, calender, sheeter and automatic stacker.
